

# Infographics of the Escabio Project

## What it's all about?

**Web App that sells drinks.**

Created by: Saracho Esteban | Lopez Matias | Carnero Panelas Flavio |  
Giordano Federico | Altamirano Adriana

## Why did we create it?

**We think that an ecommerce project of this type will allow us to market and sell it more easily to entrepreneurs.**

## Which commands do we use?

**Clone this repository. You will need NODE and NPM installed globally on your machine.**

**This project was generated with [Angular CLI](<https://github.com/angular/angular-cli>) version 13**

- 1. Create the project: `npm install -g @angular/cli`**
- 2. Install node modules: ``npm install``**
- 3. To run the project for a dev server: ``ng serve``**

***Addictional:* Run ``ng generate component component-name`` to generate a new component. You can also use ``ng generate directive|pipe|service|class|guard|interface|enum|module``.**

## Did we have help?

**Yes, we had help from libraries and dependencies that made this frontend development easier. We used Bootstrap to make our web app responsive.  
The whole project will be functional by the end of the year.**
